PROFESSIONAL SUMMARY:

Highly motivated, detail-driven 19-year-old undergraduate Information Technology student with a clear long-term roadmap focusing on complex systematic analytics, software compilation frameworks, and robust computational ecosystems. Dedicated to transitioning technical metrics into production-ready software solutions and solving modern algorithmic problems natively by merging continuous theoretical academic knowledge with active application engineering metrics to maintain structured scalability.

TECHNICAL SKILLS & CORE STACK:

Core Engineering Stack: HTML5, CSS3, Java SE Logical Design, Foundational JavaScript Systems.

Cognitive Logic & Systems: Critical Systems Analysis, Hardware Architecture Diagnostics, Structured Logical Debugging, SDLC Lifecycle Frameworks.

Productivity Infrastructure: Microsoft Word Engineering, Advanced Excel Layouts, Structured PowerPoint Displays.

Collaboration Mechanics: Synchronous Multi-tier Teamwork, Clear Structural Communication, System Milestone Management.

EDUCATION:

Bachelor of Science in Information Technology (BSIT) De La Salle John Bosco College  2025– Present (First Year Undergrad)

Senior High School Diploma De La Salle John Bosco College  2023– 2025

Junior High School Certificate De La Salle John Bosco College  2018– 2023

Elementary Education Mangagoy Elementary School  2012– 2018

ACADEMIC FOCUS & PROJECTS:

Developer Portfolio Workspace & Dashboard | Personal Web Project

Engineered a responsive dashboard-first glassmorphic workspace layout recognized for maintaining stable viewports across fluctuating mobile breakpoints.

Implemented strict semantic HTML5 structural components combined with an interactive sidebar synchronization built completely on pure CSS layout engines.

Foundational SDLC Lifecycle & Interface Ecosystems | Academic Execution

Constructed programmatic solutions through structured logical paradigms, evaluating memory handling models, core Object-Oriented Programming (OOP) designs, and UI viewport configurations.

KEY ACHIEVEMENTS & ACCOLES:

 Dean's List Academic Commendation Track Maintained elite structural metrics and

exceptional performance evaluations inside foundational computing modules and data logic systems.

🏆 Algorithmic Optimization & Logic Distinction Commended for engineering highly optimized, low-latency computational blueprints during internal competitive programming mock trials and structured logical array sprint sets.

🏆 Responsive Component Architecture Milestone Successfully designed and deployed a modular web application layout verified to dynamically support cross-platform structural rendering standards.
